

## **MOUNT WITH REPLACEABLE LOAD BEARING AND REBOUND**

### **MEMBERS**

### **ABSTRACT**

5           A mount with replaceable load bearing and rebound members is disclosed. The  
mount comprises a housing that defines a first chamber and a second chamber; a load  
bearing member removably located in said first chamber, said load bearing member  
comprising a load bearing member contact portion; a rebound member removably  
located in said second chamber, said rebound member having a rebound member  
10   contact portion, the contact portions of the load bearing member and rebound member  
being in abutment when the members are removably located in the chambers; and  
means for coupling said load bearing member and rebound member.
